

ABSTRACT OF DISCLOSURE

SYSTEM AND METHOD FOR SUPPORTING TRANSLATION OF A DOCUMENT

This system comprises a translation unit translating an inputted original sentence by selecting each translation word one by one from a plurality of translation words corresponding to each word composing the sentence and combining the selected translation words, a speech recognition unit selecting a translation word matching inputted pronunciation from a plurality of translation words that correspond to the word and have not been selected by the translation unit, and outputting the selected translation word as a result of the speech recognition, and a correction unit correcting the sentence translated by the translation unit, using the translation word outputted from the speech recognition unit.
